CAREER OBJECTIVE

Full-Stack Developer with hands-on experience building and deploying Python/Flask applications, REST APIs, and SQL-backed systems, plus practical exposure to AI-powered application development and Power BI analytics. Seeking a Software Engineer / Backend Developer role to design scalable, production-ready solutions.

SKILLS

- **Programming Languages:** Python(NumPy, Matplotlib), C, Java, HTML, CSS, JavaScript
- **Core Technical Skills:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks
- **Backend & Web:** Flask, REST API Development, Authentication & Authorization, SQL, SQLite
- **Data Analytics & BI:** Power BI, Power Query, Data Visualization, Data Modeling, KPI Analysis, Dashboarding
- **Tools & Technologies:** Git, GitHub, Version Control, LLMs, Prompt Engineering, Linux
- **Soft Skills:** Problem Solving, Team Collaboration, Quick Learner, Adaptability, Time Management

EDUCATION

- **K.V.G College of Engineering, Sullia** – B.E. (CSE), CGPA: 8.5 (2023 – Present)
- **Raghavendra Gurukula PU College, Mysuru** – XII, Percentage: 90.4% (2021 – 2023)

WORK EXPERIENCE

Full-Stack Developer & Data Analyst | Independent Projects (2025 – Present)

- Built and deployed a full-stack real estate web application using Python, Flask, and SQLite3, implementing secure authentication, property search, booking workflows, and a role-based admin dashboard — supporting 10+ live property listings with separate user and admin access control.
- Designed interactive Power BI dashboards translating raw datasets into KPI-driven business insights, using data modeling and visualization to surface actionable trends for decision-making.
- Engineered an AI-powered desktop voice assistant using Python, PyWebView, SQLite, Groq API, NVIDIA DeepSeek API, and OpenRouter. Implemented LLM-based conversational AI, intelligent intent routing, multi-provider AI fallback (Groq → NVIDIA DeepSeek) for high availability, Windows automation, web search, and AI-powered code generation and execution.

PROJECTS

AI-Powered Desktop Voice Assistant | Python, PyWebView, Groq API, DeepSeek API, SpeechRecognition, pyttsx3

GitHub Repo: github.com/BSMANOJGOWDA2005-PRO/AI_Nova_voice_assistant

- Developed an AI-powered desktop voice assistant using Python, integrating LLM-based chat, real-time speech recognition, text-to-speech, and intent-based routing for AI chat, code generation, web search, and Windows automation.
- Designed a cost-free multi-provider AI fallback architecture (Groq → OpenAI → NVIDIA DeepSeek), ensuring uninterrupted AI responses during API rate limits, improving application reliability, and eliminating additional infrastructure costs.
- Built a PyWebView desktop application with Windows automation (os, subprocess, psutil) for application control, website launching, system commands, resource monitoring, task management, AI-powered code generation, debugging, execution, image analysis, PDF analysis, document summarization, and image-based content extraction.

Real Estate Platform | Full-Stack Web Application

GitHub Repo: github.com/BSMANOJGOWDA2005-PRO/Real_estate_web_application

- Developed a scalable real estate platform using Python, Flask, SQLite3, and REST APIs, implementing secure authentication and a lightweight database architecture supporting 10+ property listings, with separate user and admin panels for role-based access control.
- Enabled users to browse properties, submit booking requests, and send inquiry messages to admins, while admins can add, approve, reject, or delete listings, and manage bookings and messages through a dedicated dashboard with advanced search, filtering, and session management.
- Live Demo: <https://real-estate-web-application-mm46.onrender.com/>

CERTIFICATIONS

- Data Structures & Algorithms in Python – Infosys Springboard (April 2025)
- AI for Beginners – HP LIFE (September 2025)
- Power BI Micro Course – Skill Course (March 2026)
